

Last call for 2018 MIPS data!

If you are submitting 2018 MIPS data on behalf of yourself or your practice, or if you use a third-party vendor to collect data on your behalf, you or your vendor must sign in to qpp.cms.gov to submit your data by **April 2, 2019 at 8pm EST**. If you submitted quality performance category measure data via Part B claims, your Medicare Administrative Contractor (MAC) should have processed your claims within 60 days of the end of the performance year.

To submit your data, you must log into the data submission portal using your HCQIS Access Roles and Profile System (HARP) account (formerly known as an Enterprise Identity Data Management (EIDM) account). **If you had an active EIDM account, your current user ID and password will automatically transition to HARP and allow you to log into your account.** If you've forgotten or need to reset your EIDM password, or if you never had an EIDM account and need to register, you can do so on the QPP website [log-in page](#). CMS has published a number of HARP-specific resources, including step-by-step instructions on how to set up an account, in the [2018 QPP Access User Guide](#).

The Quality Payment Program SURS Central Support Contractor held a webinar in February entitled, "Submitting Your 2018 MIPS Data: Advice for Solo and Small Group Practices." This webinar provided an overview of data submission options across all performance categories and was specifically tailored to solo providers and small practices. For access to the recording, slides, and Q&A from this webinar, click [here](#).

Additionally, CMS has posted a series of videos to the [QPP Resource Library](#) to help clinicians understand how to manage and submit their 2018 MIPS data through the QPP website. For more information on MIPS data submission, see the [2018 Data Submission FAQs](#). If you need personalized assistance, contact your Technical Assistance Contractor for free support with your MIPS data submission. Find your local Technical Assistance Contractor here: <https://qpp.cms.gov/about/small-underserved-rural-practices>. Thank you for your great work in 2018!

Why Opt-in to MIPS in 2019?

How registries can help your practice succeed in MIPS for 2019

Why Opt-in to MIPS in 2019?

In 2019, MIPS-eligible clinician types¹ are required to participate in MIPS if they meet all three of the Low-Volume Threshold (LVT) eligibility criteria listed below:

- Bill more than \$90,000 a year in Medicare Part B allowed charges for covered professional services payable under the Physician Fee Schedule (PFS), and
- Provide covered professional services to more than 200 Part B-enrolled individuals a year, and
- Provide more than 200 covered professional services to Part B-enrolled individuals

However, MIPS-eligible clinician types have the choice to “opt-in” to MIPS if they meet one or two of the LVT criteria. This gives clinicians and groups who were previously excluded from MIPS the chance to participate even if they are not required to do so. To check your preliminary 2019 MIPS eligibility status, enter your 10-digit National Provider Identifier (NPI) in the Quality Payment Program (QPP) Participation Status Tool (<https://qpp.cms.gov/participation-lookup/>).

So what are the benefits of opting in to MIPS?

1. **Receive a payment adjustment!** MIPS allows you the potential to get rewarded for providing high-quality care to your patients. In 2021, you could receive a maximum payment adjustment of up to 7% and an exceptional performer bonus of up to 0.5% based on your performance in 2019. It is important to note that payment adjustments are subject to budget neutrality provisions and may be lower than the maximum threshold amount. In addition, if you opt-in, you may be subject to a potential negative payment adjustment depending on your performance.
2. **Improve your patients’ health and quality of care.** You will be scored based on your performance achieving key benchmarks for critical health care services relative to your peers. If you can identify creative, new ways to deliver better care at a lower cost, you will not only be receiving a higher payment adjustment, but more importantly you will be making your patients healthier.
3. **Showcase your high performance on Physician Compare.** Get recognized for the high-quality care you already provide by participating in MIPS and having your performance ratings publically available on the [Physician Compare website](#). Click [here](#) for more details on the clinician performance information that will be available on Physician Compare.
4. **Increase your staff’s engagement.** You can foster teamwork and collaboration among your staff by working together to select, track, and improve upon your MIPS measures.
5. **Obtain additional resources by joining a MIPS Alternative Payment Model (APM).** By joining a MIPS APM, such as a Medicare Shared Savings Program (MSSP) Accountable Care Organization (ACO), you can receive preferential scoring, such as an automatic 100% on the Improvement Activities performance category. You can also benefit from the APM entity’s resources, including IT and data analytics capabilities. Want more help deciding whether you should opt-in to MIPS? Reach out to your local Technical Assistance Contractor for free in-person or virtual assistance. Find your local Technical Assistance Contractor here: <https://qpp.cms.gov/about/small-underserved-rural-practices>.

¹MIPS Eligible Clinician Types include Physicians (including Doctors of medicine [KE3] [NS4], osteopathy, dental surgery, dental medicine, podiatric medicine, and optometry), Osteopathic practitioners, Chiropractors, Physician assistants, Nurse practitioners, Clinical nurse specialists, Certified registered nurse anesthetists, Physical therapists, Occupational therapists, Clinical psychologists, Qualified speech-language pathologists, Qualified audiologists, and registered dietitians or nutrition professionals.

How registries can help your practice succeed in MIPS for 2019

Clinicians and groups have multiple options for how to collect and submit their MIPS data, you may want to consider a Qualified Registry or Qualified Clinical Data Registry (QC/QCDR) to collect and submit your MIPS data.

There are two types of registries, and both can submit MIPS measures on your behalf:

- Qualified Registries; and
- Qualified Clinical Data Registries (QCDRs).

The difference between the two is that Qualified Registries are limited to the standard MIPS measures, whereas CMS-approved QCDRs typically offer additional measures that are relevant to their specialty. QCDRs may be particularly helpful for specialties that have a limited set of standard MIPS measures from which they can choose.

Registries are beneficial for the following reasons:

- Most registries can submit MIPS data to CMS on your behalf across all three performance categories (Quality, Promoting Interoperability, and Improvement Activities).
- If you do not have an EHR, some registries will let you submit your data to them through a spreadsheet, and then they will submit your data electronically on your behalf.
- Some registries can automatically pull data from compatible EHRs, saving you time and effort.
- Some registries will let you submit data retroactively, which may be helpful if you started late in collecting data on quality measures.
- QRs and QCDRs are required to provide MIPS-eligible clinicians with feedback reports at least four times a year, on all performance categories.
- Using a registry can provide you with the data you need to monitor and improve your patient population health, and to get credit for MIPS population health improvement activities.

Choosing the right registry can also make your work easier. As Dr. John Wachter explained:

The registry I use is submitting all of our MIPS data for us. It's very good - they're very helpful, pretty much foolproof. You have your own account manager who usually responds within 24 hours and is very knowledgeable about all the changes that occur throughout the year.

John B. Wachter, O.D.

To choose a registry, consider these questions:

- Which registries, if any, does your professional association recommend? Is your registry in good standing with CMS? Check the list of CMS-approved qualified registries (see link at the bottom of this article).
- How much experience does your registry have? CMS regulations change every year, so if your registry has been around for a few years, it probably has some agility in responding to changes.
- What measures does your registry support? Does it support measures that are meaningful for your practice and your patient population?

- If you have an electronic health record (EHR):
 - ◊ How well does your registry communicate with your EHR (and vice-versa)?
 - ◊ Does your EHR support the same measures as your registry? If not, can you negotiate that feature with your EHR vendor?
- Can the data be automatically sent to the registry by your EHR? If not, what are your options for reporting to the registry?
- What is the cost? Consider not only the fees associated with your registry, but also the cost of time spent to submit data to the registry, retrieve data, and interpret reports.
- Can you use a registry for purposes besides MIPS data submission? For example, can you use it to submit to other quality reporting programs? Does it provide you with dashboards that make it easy to prioritize population health interventions for your patients?
- What do your fellow clinicians say about their experience with registries, especially with respect to customer service, data accuracy, ease of use, or other considerations that matter to you?
- Does your registry have a data submission deadline that's before the CMS submission deadline? Some registries may require you to submit data before the CMS deadline.

SURS Practice Spotlight: Lynn Karaffa

Processing all the information about MIPS and other quality improvement programs can feel overwhelming, but Lynn Karaffa, a practice manager for Campbell and Philbin Medical Associates in Pittsburgh, PA has it under control. In 2017, she helped her six-provider internal medicine group to attain a **MIPS score of 92.9**. Here are some of the strategies she deployed to get to that result:

- **Align your quality measures:** In addition to MIPS reporting, Lynn's practice reports quality measures to Medicare Advantage plans and two large medical systems. To keep the workload under control, Lynn focused her reporting on measures used across all these quality programs. Measures include body mass index (BMI) screening and follow-up, fall risk assessment screening, breast and colon cancer screening, and use of the prescription drug monitoring program (PDMP).
- **Leverage the state's Prescription Drug Monitoring Program to improve patient care:** Lynn says, "The PDMP is the next best thing to sliced bread. We can see when patients are visiting multiple providers, or using multiple pharmacies, or paying cash for their medications, and it pulls information from neighboring states, as well." To keep patients safe, she also shared an online morphine equivalent calculator that her Technical Assistance Contractor had sent with the nurses in her practice. The nurses said this was exactly what they needed. You can find the calculator here: <http://www.agencymeddirectors.wa.gov/Calculator/DoseCalculator.htm>

Monthly Observance: Colorectal Cancer Awareness

March is [Colorectal Cancer Awareness Month](#), and a good reminder to talk to your patients about their risk for colorectal cancer. As the fourth most common type of cancer in the U.S., the Centers for Disease Control and Prevention (CDC) recommends regular screenings for men and women over the age of 50 to identify this cancer at the earliest stage possible. African Americans and minorities have a higher risk of colorectal cancers than other racial or ethnic groups, so it is important to help those at higher risk get regular screenings.

There are several MIPS quality measures that help providers address colorectal cancer. To help decrease the prevalence of this cancer, consider reporting on one of the quality measures below. For more information on colorectal cancer, click here: <https://www.cdc.gov/cancer/colorectal/index.htm>.

| MIPS Quality Measure | Description |
|--|---|
| Quality ID 113: Colorectal Cancer Screening | Percentage of patients 50-75 years of age who had appropriate screening for colorectal cancer |
| Quality ID 343: Screening Colonoscopy Adenoma Detection Rate | The percentage of patients age 50 years or older with at least one conventional adenoma or colorectal cancer detected during screening colonoscopy |
| Quality ID 451: RAS (KRAS and NRAS) Gene Mutation Testing Performed for Patients with Metastatic Colorectal Cancer who receive Anti-epidermal Growth Factor Receptor (EGFR) Monoclonal Antibody Therapy | Percentage of adult patients (aged 18 or over) with metastatic colorectal cancer who receive anti-epidermal growth factor receptor monoclonal antibody therapy for whom RAS (KRAS and NRAS) gene mutation testing was performed |
| Quality ID 452: Patients with Metastatic Colorectal Cancer and RAS (KRAS or NRAS) Gene Mutation Spared Treatment with Anti-epidermal Growth Factor Receptor (EGFR) Monoclonal Antibodies | Percentage of adult patients (aged 18 or over) with metastatic colorectal cancer and RAS (KRAS or NRAS) gene mutation spared treatment with anti-EGFR monoclonal antibodies |
