

Collaborating to meet your needs

Org1

Org2

We are working hard to provide top-notch medical care to all of our patients.

Sometimes, the care that a person needs isn't about their diagnosis as much as it is about making sure that they are connected to programs and services outside of the hospital. That's why we have joined the [Caring Beyond Healthcare](#) project—so that we can connect patients and their families to community resources quickly and easily.

Caring Beyond Healthcare Pilot Project

Early screening and referral
to community services

What does this mean to me?

With your permission, we will ask non-medical questions in order to better understand:

- You as a person (*not just a patient*)
- Any needs you may have
- Whether you may qualify for additional benefits, programs, or services

If we identify needs that might be served by a community resource, we will follow up and help connect you to the appropriate services. (*See contact information on reverse.*)

All information is handled in a secure manner.

It's your choice!

Your decision whether or not to participate will NOT impact your ability to receive medical care.

Questions or concerns?

Your questions and concerns are very important to us. If you want to further discuss this project, your screening, or available resources, please contact us!
